

EnergyCal™

Energy- and calcium supplement for fresh cows

EnergyCal is an energy- and calcium supplement for fresh cows providing the cow with water, easily absorbable energy and calcium shortly after calving.

EnergyCal contains:

- Lactose and sweet whey powder as energy sources with good palatability
- Dextrose provides easily absorbable energy
- Easily absorbable calcium supporting calcium balance after calving
- Electrolytes for reestablishment of the electrolyte balance after calving
- Citric acid provides taste and supports appetite for drinking

Benefits and effect:

- Stabilizes blood sugar level and through that stable energy balance
- Supports early feed intake
- Re-establishes effectively fluid and electrolyte balance
- Optimizes calcium blood level shortly after calving
- Water (30 L) and electrolytes supports hydration of the cow and reduces post calving challenges

Packaging:

- Bucket of 10 kg
- 48 buckets per pallet

Application:

Dissolve 0.5 – 1 kg EnergyCal in 15 litres of hot water (40 °C) and administer immediately after calving when the cow's appetite for drinking is high.

Subsequently the cow should be offered additionally 15 litres of lukewarm water to ensure sufficient water intake.

Consumption:

- 0.5 - 1 kg per cow
- 10-20 treatments per bucket
